

2D barcode valid for all places that are using the NHS COVID Pass service

**Name:**

COLIN MERCER

**Date of birth:**

4 March 1940

**2D barcode expires:**

20 February 2022 at 12.53pm

## How to use your NHS COVID Pass

### Understanding your 2D barcode

This 2D barcode has been issued by the NHS based on your test and vaccination results to help verify that you've been vaccinated against COVID-19 - or tested negative.

#### What does the code show?

Scanning the code will show your name, your test or vaccination confirmation, and an expiry date. The duration of validity depends on whether you were tested or vaccinated.

#### What can I do with this code?

These 2D barcodes are issued as part of the NHS COVID Pass service. If you need to prove your COVID-19 status, show this 2D barcode so it can be scanned with the NHS COVID Pass verifier. You must continue to follow all destination and government guidelines, including the wearing of masks and social distancing.

#### What to do when my barcode expires?

Your 2D barcode expires:

- a maximum of 30 days from the date of issue, if you're fully vaccinated or part of a COVID-19 clinical trial
- 48 hours from the time of a negative test

When your barcode expires it does not mean your vaccination status has expired. Barcodes expire for security reasons. You can generate a new barcode by logging in to the NHS COVID Pass app (part of the NHS App), then download or email yourself a new PDF (printable) copy.
